

Project Executable Files

Date	04 July 2026
Team ID	
Project Name	Smart Lender
Maximum Marks	3Marks

Project Executable Files

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://smart-lender-2z2i.onrender.com
Login Credentials (Demo)	N/A(No Login Required)
Platform / Hosting Provider	Flask Web Application (Python, VS Code & Google Coolab
Repository Link	https://github.com/Hasini160817/AIML-Track-Project-Smart-Lender.git
Demo Video Link	https://drive.google.com/file/d/1KTBQhSxxtjKuAldKAyjKa3dr2THWLH5p/view?usp=sharing

Step 4: Run Instructions

Pre-requisites:

- Python 3.8 or higher
- VS Code
- Google Colab (for model training)
- Flask, Pandas, NumPy, Scikit-learn
- Internet connection

Step 1: Download or copy the Smart Lender project folder to your computer.

Step 2: Open the Smart Lender project folder in Visual Studio Code.

Step 3: Install the required Python packages using:

```
pip install -r requirements.txt
```

Step 4: Ensure the trained model file (loan_model.pkl) is available in the project folder.

Step 5: Open the terminal in VS Code and run:

```
python app.py
```

Step 6: Open the URL displayed in the terminal (usually <http://127.0.0.1:5000>).

Step 7: Enter the required loan applicant details in the form.

Step 8: Click the "Predict" button.

Step 9: View the prediction result (Loan Approved or Loan Rejected).

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Flask application initially did not display the web page correctly.	Fixed by configuring Flask to load input.html correctly.
2	Model prediction initially failed due to model loading or configuration issues.	Resolved by correctly loading the trained model (loan_model.pkl) in app.py .
3	The application currently runs only on the local system.	Successfully tested in VS Code on localhost (http://127.0.0.1:5000). It can be deployed online in the future for wider access.
