

Technology Stack

Date	26 June 2026
Team ID	
Project Name	Smart Lender
Maximum Marks	2Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Technology Stack Details:

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	React.js, HTML5, CSS3, Bootstrap	Responsive UI, fast performance, reusable components, and mobile-friendly design to provide a better user experience.
2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	Node.js + Express.js	Fast API development, scalable architecture, and efficient handling of business logic and multiple user requests.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	MySQL	Secure relational database for storing customer, loan, repayment, and transaction data with strong integrity and reliability.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	AWS (EC2) / Render	Reliable hosting, easy deployment, scalable infrastructure, high availability, and cost-effective solution.
5	Version Control & CI/CD (e.g., GitHub, GitLab, Jenkins)	GitHub + GitHub Actions	Source code management, team collaboration, automatic build, testing, and deployment for continuous integration and delivery.
6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	Razorpay (Payments) Twilio (SMS/OTP) Gmail API (Email) Credit Bureau API	Enables secure payments, OTP verification, email notifications, and credit score verification through credit bureau integration.
